What Is Being Done?

The Michigan Department of Transportation (MDOT) is investing \$3.4 million to improve 3.4 miles of Old M-21 (Chicago Drive) from Rush Creek in the city of Hudsonville to west of Main Street in Georgetown Township (Jenison). This project includes resurfacing the roadway, concrete joint repairs and shoulder improvements. Bridge railing replacement and deck rehabilitation over Rush Creek also are included in this project.

When Will This Be Done?

Construction is scheduled to begin in April and be completed in July 2007.

How Will Traffic Be Affected?

Old M-21 (Chicago Drive) traffic will be maintained with traffic shifts and lane or shoulder closures, with a minimum of one lane open in each direction at all times. Overnight lane closures will be required at the bridge over Rush Creek during the barrier wall replacement work and several weekends to allow for the concrete joint repairs. During the other stages of this project, when possible, an effort will be made to minimize commuter traffic congestion by restricting morning lane closures to the west-bound lanes, and afternoon lane closures to the eastbound lanes.

Long-term Benefits

These improvements on Old M-21 (Chicago Drive) will allow for continued service of the roadway while improving the ride quality.

MDOT and the Granholm administration are committed to providing Michigan with a safe, efficient and seamless transportation system that grows Michigan's economy, protects Michigan families, and improves the quality of life in every Michigan community.
